I = INTRODUCTION	Netherlands was ranked the best in a study that ranked child welfare in 6 categories: material well-being, health, education, relationships, behaviors and risks, and young people's sense of happiness.
E = EVERY 1 ST SENTENCE	The U.S. and Britain ranked as the worst places. Some of the wealthier countries' lower-rankings were a result of less spending on social programs and "dog eat dog" competition in jobs. Highest ranking for U.S. was in education. Lowest ranking for U.S. was in health and safety. U.S. had highest proportion of children living in single-parent homes. U.S. close to bottom of the scale for children who eat and talk frequently with family. Children in Netherlands, Spain, and Greece were the happiest.
V = VOCABULARY & VISUALS	
E = END OF CHAPTER QUESTIONS	
S = SUMMARY

best-off”

Details

Summary

Key Ideas

“Well-off nations’ kids are not the best-off”

Details

U.S. & Britain ranked as the worst places to be a child among 21 industrialized nations.

UNICEF conducted the report

Looked at 6 categories

Material well-being

Health

Education

Relationships

Behaviors and risks

Young people’s sense of happiness

Lower rankings were a result of less government spending on social programs and “dog eat dog” competition for jobs, which led adults to not spend time with their children.

The U.S.’s highest ranking was in education, but ranked in the bottom third on the other 5 categories.

U.S. has high rates of child deaths (mortality) and accidental deaths, which is why it ranked at the bottom for health and safety.

The U.S. was next to last in the rankings for family and peer relationships and risk-taking behaviors.

U.S. also has the highest rate of children living in single-parent homes, which the study stated increased the child’s risk of poverty and poor health.

Summary

Key Ideas

“Well-off nations’ kids are not the best-off”

Details

U.S. & Britain ranked as the worst places to be a child among 21 industrialized nations.

UNICEF conducted the report

Looked at 6 categories: Material well-being; Health; Education; Relationships; Behaviors and risks; and Young people’s sense of happiness

Lower rankings were a result of less government spending on social programs and “dog eat dog” competition for jobs, which led adults to not spend time with their children.

The U.S.’s highest ranking was in education, but ranked in the bottom third on the other 5 categories.

U.S. has high rates of child deaths (mortality) and accidental deaths, which is why it ranked at the bottom for health and safety.

The U.S. was next to last in the rankings for family and peer relationships and risk-taking behaviors.

U.S. also has the highest rate of children living in single-parent homes, which the study stated increased the child’s risk of poverty and poor health.

Summary

UNICEF reported that the U.S. ranked as one of the worst industrialized places for children. The report listed 6 categories, in which the U.S. ranked in the bottom third for 5 of them. The study suggested that the U.S.’s low ranking may be attributed to the high proportion of children living in single-parent homes, which increases the risk of poverty and poor health.
